

To create figure four in the Enquist et al. megabiota paper, run the code megabiota.m which will require the data Phosphorus2.mat. These files are both contained within this folder. This will create figure 4b as seen below:

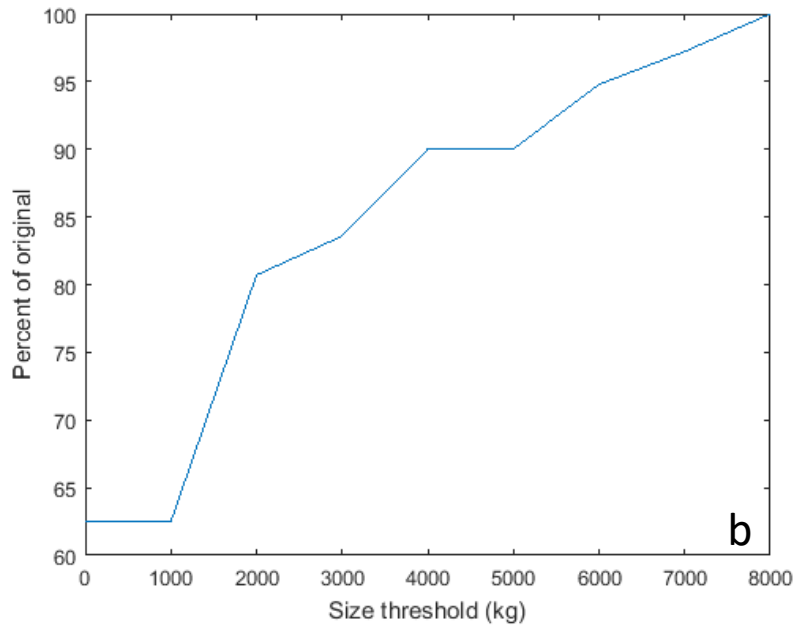

Figure 4a (below) is a figure modified with permission from Doughty et al 2013. The original figure is found in the manuscript contained in this folder and the supplementary figure shows all the theory and data inputs needed to create it.
